1988 POPULATION ESTIMATES FOR NORTH CAROLINA MUNICIPALITIES AND COUNTIES

This report presents estimates of the July 1, 1988 permanent resident population of North Carolina, each of its 100 counties, and each of its 528 incorporated municipalities within boundaries as of July 1, 1988. For comparative purposes the April 1, 1980 and April 1, 1970 Censuses for each municipality (within boundaries as of January 1 of each respective year) and the percentage change in population during the estimate period (April 1, 1980 to July 1, 1988) are shown. In addition, the populations of all municipalities over 2,500 are listed, ranked by size. The municipalities with the largest percentage change in population during the estimate period are presented in 4 size categories. The municipalities which have had the largest population growth due to annexations during this period and the municipalities which have annexed the largest amounts of land during this period are also listed. For the 25 largest municipalities and for selected county balances, the estimate period growth is presented in two parts, the growth (or loss) due to annexation and the growth within the January 1, 1980 (1980 Census) boundaries.

The state and county population estimates presented here were prepared by the North Carolina Office of State Budget and Management in cooperation with the United States Bureau of the Census. The county estimates were prepared through the Federal-State Cooperative Program for Local Population Estimates. The methods used in generating the county estimates are discussed in detail in "Provisional Estimates of the Population of North Carolina Counties, July 1, 1988", State of North Carolina, Office of State Budget and Management, Management and Information Services, July 1989.

Municipal population estimates have been prepared by the Office of State Budget and Management to meet the needs of data users requiring estimates more current than the 1980 Census. Annual municipal estimates are prepared in two series: one for state and municipal planning purposes and a second for the distribution of state-shared revenues. The series presented in this publication is for planning purposes and estimates the population as of July 1, 1988 residing in municipal boundaries as of the same date.

Because of specific legislation, municipal estimates for revenue sharing purposes must reflect the population as of July 1, 1988 residing in municipal boundaries as of July 1, 1989. This information is regularly supplied to municipal and county governments and is available upon request.

These municipal population estimates were developed from federal census counts as reported in the 1980 Census of Population Volume 1, Characteristics of the Population, Chapter A, Number of Inhabitants, PC80-1-A35, U.S. Department of Commerce, Bureau of the Census, including all known corrections to that report, and corresponding data from the 1970 Census of population. The federal census counts were updated to July 1, 1988 by the North Carolina Office of State Budget and Management, Management and Information Services, by the procedure outlined on pages 2 and 3 of this document.

ESTIMATING POPULATION GROWTH SINCE THE 1980 FEDERAL CENSUS

The municipal population estimate is based on an average of three or four methods, depending upon the availability of valid auto and truck registration data. Each method uses the non-group quarters population from the 1980 Federal Census as a base. Any trends used are applied to this base population. If a city has had a special census since the federal census, the special census and the federal census are used to develop a growth rate which is weighted in with the growth rate derived assuming no special census. The resulting rate then is applied to the special census population at the special census date. The 1988 estimate of the population living within 1980 census municipal boundaries (or special census date boundaries) is added to the population in areas annexed from January 2, 1980 (or the special census date) through July 1, 1988. For each method, the sum of the 1988 non-group quarters population estimates for all municipalities (excluding those with a special census) and the county balance is forced to the county non-group quarters population estimate (minus the sum of all estimates for municipalities with a special census). Then, a current group quarters population count is added to each estimate to produce the total population estimate for 1988. The following is a brief description of the methods used.

METHOD I. CONSTANT PROPORTION

This method assumes that the the non-group quarters population of a municipality grows at the same rate as the non-group quarters population of the county in which it is located. The population of each individual area annexed from 1980 to 1988 is assumed to grow from its count date to July 1, 1988 at this same rate.

METHOD II. PARTITIONED CHANGE

This method assumes that areas more recently incorporated into the city limits of a municipality may grow at different rates from that of the core city. The non-institutional population of a municipality is divided into three geographical areas: the 1970 core city (areas enclosed by the 1970 corporate limits), the suburbs (all areas annexed between 1970 and 1980), and individual areas (annexed between January 1, 1980 and July 1, 1988). The 1980 population of the suburbs is estimated by growing each area annexed between 1970 and 1980 from its count date to 1980 at a rate determined by its density (2 exceptions, the 1980 suburban area populations for Charlotte and for Raleigh were obtained from a special U. S. Census Bureau analysis of the 1980 Federal Census). From the 1980 suburban population and the 1980 non-institutional population, the 1980 population of the core city is determined. The core city is assumed to grow from 1980 to 1988 at a rate which is a function of its 1970 to 1980 growth rate and the change in the average annual growth of its county between the 1970-80 decade and the 1980-88 time period. The suburban area is grown from 1980 to 1988 at a rate which is a function of the growth rate of the core city, the growth rate of the county as a whole, the density of the suburban area, the density of the core city, and the density of the county as a whole. Each area annexed from 1980 to 1988 is grown from its count date to July 1, 1988 at a rate which is a function of the growth rate of the 1980 city (the core city plus the suburban area), the growth rate of the county as a whole, the density of the annexed area, the density of the 1980 city, and the density of the county as a whole.

METHOD III. VITAL RATES

This method uses either reported or estimated natural increase and an estimate of migration to approximate the change in the non-group quarters population of the municipality from 1980 to 1988. Natural increase data is available for all counties and for almost all larger municipalities (population 2,500 or greater). Natural increase for the non-urban portion of each county (smaller municipalities and unincorporated area) is allocated to each of the smaller municipalities and the unincorporated area based on relative population. Migration for the estimate period is estimated using four sets of migration rates (1980 to 1982, 1982 to 1984, 1984 to 1986, and 1986 to 1988), each of which is derived from Federal Income Tax data.

METHOD IV. AUTO AND TRUCK REGISTRATION

This method assumes that the growth of a municipality's share of the county population is proportional to the growth of its share of the automobiles and trucks registered in its county. Valid auto and truck registration data for most of the larger municipalities (more than 2,500 population) are available for December 1981 and January 1989. For other municipalities this method was not used.

DATA USER NOTES

Municipal estimates for each year during the 1980's have been generated independently of estimates for any previous year. This procedure allows flexibility for improvement of data sources and methods over the period of a decade. Trends in small area population fluctuate from year to year, and the user should be aware that the trend set for 1980-1988 may not be the same as the trend seen in previous or subsequent years. For this reason, any user studying the recent population trend for a particular municipality should compare only the most recent population estimate available with the 1980 and 1970 censuses to attain the best estimate of change.

Table 1 presents population estimates for North Carolina municipalities by county for July 1, 1988 in July 1, 1988 boundaries. Table 2 presents total population for municipalities located in more than one county. Table 3 presents July 1, 1988 populations of all North Carolina municipalities larger than 2,500, ranked by size. Table 4 presents the currently fastest growing municipalities in 4 size categories. Table 5 presents the municipalities which have gained the most (population or land area) from recent annexations. Table 6 presents the total growth, the growth (or loss) due to annexation, and the growth of the 1980 city (or county balance) for the largest 25 municipalities and for selected county balances. An index of municipalities by county of location is included for the benefit of persons uncertain as to the location of certain cities.

FOOTNOTES FOR TABLE I

- ¹ This municipality incorporated or reactivated between the 1970 and 1980 Censuses. The 1970 figure shown is a separation count derived by the Bureau of the Census shortly after incorporation and is therefore not published in 1970 Census Reports.
- ² This municipality is inactive but not officially disincorporated. Because of this status, the town was not reported separately by the Bureau of the Census for 1970 and/or 1980.
- ³ This municipality became a multi-county town through annexation since the 1970 Census.
- ⁴ This municipality incorporated since the 1980 Census. The figure shown for 1980 is a separation count derived after incorporation and is not published in 1980 Census reports.
- ⁵ The Village of Pinehurst incorporated in July 1980, and a 1970 Census separation count was calculated shortly thereafter. The figure shown for 1980 is also a separation count derived at a later time.
- ⁶ In 1970 the Town of Littleton consisted of a population of 433 in Halifax County and 470 in Warren County. In 1973 the General Assembly of North Carolina authorized a special election in order that the town's voters might decide in which of the two counties the town would be located. The result was a change in the county line so that Littleton is located totally in Halifax County. 1970 Census figures shown in this publication reflect these changes.
- ⁷ The City of Kannapolis incorporated in December of 1984. The estimates are derived using a 1980 separation count in addition to a local housing unit count provided by the city.
- ⁸ The Town of Marietta reactivated on April 22, 1985, after redefining the town boundaries. A local census was conducted in September 1985 and used in making the subsequent estimates.
- ⁹ This municipality became a multi-county town through annexation since the 1980 census.
